# the griddle

Word Search, Archipelago, ...and More!

Archipelago: Create rectangular or square shaded "islands" that don't touch horizontally but connect diagonally so you can reach any island from another. Numbers represent the size of the island they're a part of - one is given for you. Some islands are unmarked and you must find them. Unfilled "water" squares cannot form a 2x2 square.

Loop de Loop: Place each digit 1 thru 8 around each square using the rules given.

Crosswords: enter letters (2 in cells with a diagonal) to create words that correspond to the given clues.

**Wordsearch:** find the words in the grid.
