In each of these puzzles, fill the grids with vampires (which have no reflections), ghosts (which are only seen as reflections), aliens (which are seen face on and have 2 reflections) and zombies so that the numbers outside the grid tell how many monsters are seen from that viewpoint looking into the grid.

The miniature grid below is an example of the way each monster can (or can't) be viewed within a puzzle.

Haunted Mirror Mazes come in a variety of flavors - Flash game, iPhone app, and Java applet. See them at <http://www.thegriddle.net/haunted>

These puzzles were created by David Millar in 2007 **but fixed and updated in 2010 for Maintenance Month thanks to help from Stephen**. More puzzles can be found can be found at <http://www.thegriddle.net>
