

## Instructions

In this sudoku variation, fill each curved row-column, column-row, and shaded region with each digit 1 through 9, sans repetition.

All digits placed in cells marked with an 'e' must be even. Digits placed in cells without an 'e' must be odd.

Greater-than and less-than symbols have been placed between some pairs of cells in the grids, and the digits placed should reflect that.

## Throwback

Thanks to Henry Park who found and reported a flaw in the original posting of the puzzle in the top-left of this sheet. I've added five more puzzles in this new version along with the correction to the first.

Thanks also to Nancy B. and Grant Fikes for their test solves of the set prior to posting them.
