For each puzzle, draw a single closed loop along the grid lines using the clues given. The loop must not have any intersections with 3 or more line segments and must not have any dead ends with a single line segment coming to a halt.

The shapes in each square are placeholders representing the number of surrounding lines that are part of the loop - 0 through 3. You must figure out which shape represents which number and solve the puzzle with a single loop based on those numbers.

Created by David Millar. Feel free to share this puzzle with friends and send them over to The Griddle (thegriddle.net) for this puzzle and more.
