For each puzzle, draw a single closed loop along the grid lines using the clues given. The loop must not have any intersections with 3 or more line segments and must not have any dead ends with a single line segment coming to a halt.

Some squares contain a number indicating the number of surrounding lines that are a part of the loop. Blank squares represent and unknown number of line segments - blank squares DO NOT represent 0.

The shapes in some squares are placeholders representing the number of surrounding lines that are part of the loop - 0 through 3. You must figure out which shape represents which number and solve the puzzle with a single loop based on those numbers.
