Super 21 Shape Sudoku

January 26 2010

In these puzzles, fill the grid with digits from 1 to 5. Each 7 square row and column should contain each digit 1 through 5 at least once and add to 21. Each of the rows and columns of the 5 by 5 sudoku in the middle and each shape should contain the digits 1 through 5 once. No two neighboring squares should contain the same digit.

Puzzle created by David Millar. More puzzles can be found on http://www.thegriddle.net. You should follow me on Twitter at @thegriddle (http://twitter.com/thegriddle) and/or grab our RSS feed.
