

Super Clue Slitherlink

January 28 **2010**

In this puzzle, draw a single closed loop along the grid lines using the clues given. The loop may not cross itself, fork, or dead-end. Where provided, number clues indicate the number of line segments surrounding the number's square that are a part of the loop.

Masyu-ish clues: White circles must have a straight line through them, but there must be a 90 degree turn before and/or after the white circle. Gray circles must have a 90 degree turn in the loop, but DO NOT have the requirement of a straight line-segment before and after as in black Masyu clues.

Encrypted clues: The geometric shapes provided in some squares represent unknown slitherlink clues. It is up to the solver to determine the value of each shape, and each shape has a unique value.
