

Adjacent Digits

Inequality

Difference

Odd-sum Pair

In these puzzles, fill each of the 5 grids with digits from 1 to 6 such that each row, column, and shape contains each digit once (*or twice in larger shapes*).

The puzzle consists of five overlapping 6x6 grids. Each grid has a unique shape defined by solid lines. The grids are interconnected, sharing rows and columns. The constraints for each grid are as follows:

- Grid 1 (Top Left):** Contains numbers 1, 2, 3. Symbols: circles in (1,3), (1,4), (1,5), (1,6), (2,6), (3,6), (4,6), (5,6), (6,6). Chevrons: > in (1,2), (2,2), (3,2), (4,2), (5,2), (6,2); < in (2,3), (3,3), (4,3), (5,3), (6,3); ^ in (2,4), (3,4), (4,4), (5,4), (6,4); v in (2,5), (3,5), (4,5), (5,5), (6,5).
- Grid 2 (Top Right):** Contains numbers 1, 2, 3, 5. Symbols: circle in (5,6). Chevrons: > in (1,2), (3,2), (4,2), (5,2), (6,2); < in (1,3), (2,3), (3,3), (4,3), (5,3), (6,3); ^ in (1,4), (2,4), (3,4), (4,4), (5,4), (6,4); v in (1,5), (2,5), (3,5), (4,5), (5,5), (6,5); = in (1,6), (2,6), (3,6), (4,6), (5,6), (6,6).
- Grid 3 (Bottom Left):** Contains numbers 1, 2, 3, 4, 5. Symbols: circles in (5,6), (6,6), (6,7). Chevrons: > in (2,3), (3,3), (4,3), (5,3), (6,3); < in (2,4), (3,4), (4,4), (5,4), (6,4); ^ in (2,5), (3,5), (4,5), (5,5), (6,5); v in (2,6), (3,6), (4,6), (5,6), (6,6).
- Grid 4 (Bottom Right):** Contains numbers 1, 3, 4. Symbols: circles in (5,6), (6,6), (6,7). Chevrons: > in (1,2), (3,2), (4,2), (5,2), (6,2); < in (1,3), (2,3), (3,3), (4,3), (5,3), (6,3); ^ in (1,4), (2,4), (3,4), (4,4), (5,4), (6,4); v in (1,5), (2,5), (3,5), (4,5), (5,5), (6,5); = in (1,6), (2,6), (3,6), (4,6), (5,6), (6,6).
