

## Instructions

Complete each of the 6x6 sum sudoku puzzles using typical sum sudoku rules; each row and column must have each digit 1 through 6 and digits within a given area must add to the sum given.

After the first sudoku is done, copy each 1 into the same cell in the puzzle below it. Do the same with each 2 in the second puzzle and so on, until the final puzzle where you must copy both the cells with 5 and 6 in them to the last puzzle.
