

## Step 1

Use the clues to establish each player's count of flags captured each game and cumulative K/D spread in the story logic problem. Circle correct pairings.

	K/D Spread			Flag captures as...								
	+15	+12	+4	Red			Blue					
				1	3	4	2	5	7			
Dave	3	2	7									
Joe	5	1	4									
Kris	2	4	1									
Blue	2	4	3	7								
	5	1	9	3								
	7	9	2	5								
Red	1											
	3	8	4	7								
	4	3	2	1								

## Step 2

Take the digits you circled in the story logic problem and place them in the squares in the sudoku grid within the same row.

Solve the Knighted Sum Sudoku puzzle with digits 2 through 9 using the digits and the sum cages.

No knight has a sum given - instead, solve the entire puzzle, THEN find the sum for each of the knights' attacked cells.

## Step 3

Solve the crossword clues to find the letter/number pairs. Some of the pairs are given in the sudoku puzzle; each knight has a letter to be paired with the sum of its attacked cells.

## Halo: Reach

Dave and friends played a few games of Stockpile in Halo: Reach online. In one we played as the Red Team; in the other we played as the Blue Team.

- Joe and Kris both had 6 flag captures in total.
- Dave's K/D spread was smaller than whoever got 1 flag while Red.
- Joe's K/D spread was better (higher) than Kris's.
- Joe had more flag caps while Red than while Blue.
