

Instructions

In each of these puzzles, place each digit from 1 to 7 into each row and column or the two overlapped grids with no repetition.

On the top left side of the puzzles, greater-than and less-than symbols are displayed between cells to mark the higher and lower digits in the pair.

On the bottom right side, whenever two cells share a rectangle at their border, the two cells must contain consecutive digits. (e.g. 1/2, 2/3, etc.)

Cells that do not share a rectangle at their border must contain digits that are not consecutive.
