

Instructions

Today's piece displays difference clues. Place the shape sudoku lines and clue symbols into the grid marked '4' on your advent calendar sheet, and proceed to solve (as much as is possible) using the new clues.

Difference

Digits displayed between two cells are the difference between the two digits in the adjacent cells. In other words, cells with a 2 and a 5 have a difference of 3, so a 3 would be displayed.

Errata

As Matchu pointed out in the comments, the original posting of this puzzle had Day 3's clue instructions. Fixed now, and I'll do my best to check both the puzzle grids AND the instructions from now on!
