

Instructions

Today's piece displays consecutive clues. Place the shape sudoku lines and clue symbols into the grid marked '6' on your advent calendar sheet, and proceed to solve (as much as is possible) using the new clues.

Consecutive

Where two cells share a rectangle on their border, the cells are consecutively adjacent digits. (e.g. 1 and 2, 2 and 3, 5 and 6)

All clues possible within this 6x6 space are given, but clues possible on the grid's edge are not given.
