

Instructions

Create a loop through the grids at right following the clues given.

Each cell with an uncircled digit is a slitherlink-style clue, and must have that amount of walls around it.

Only clues for cells with 3 walls around them are given, and all such possible clues are given. In other words, if there's not a slitherlink clue of 3 in a cell, it must have more or less than 3 walls around it.

Circled numbers are alien pods and represent Corral-style clues. The cell must be inside the loop and the number tells how many cells can be seen up, down, left, and right (plus itself) from that cell before reaching a wall.

All of the cacti must be outside the drawn loop only.

The puzzle consists of a 15x15 grid. The clues are as follows:

- Slitherlink-style clues (uncircled numbers):** 3, 6, 9, 12, 15.
- Alien pods (circled numbers):** 6, 9, 12, 15.
- Cacti symbols:** 12 cacti are placed at various positions on the grid.
