

## Instructions

Fill each of the grids with each number from 1 to 24 with no repeats.

The triangles within the grids point (in multiples of 45 degrees) to the cell with the next highest digit: 1 points to 2, 2 points to 3 ... 23 points to 24, and 24 points to 1. The triangles always point directly to the next number; it must be in the same row, column, or diagonal as the previous number in the sequence.

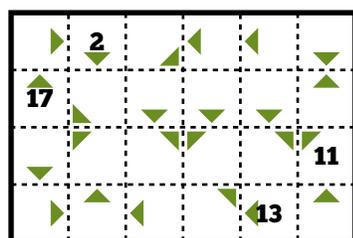

Some boards also contain column sums below the grid to aid solving.

## It's June 8th

Today is my 24th Birthday. Thanks to everyone who has made the past year great.

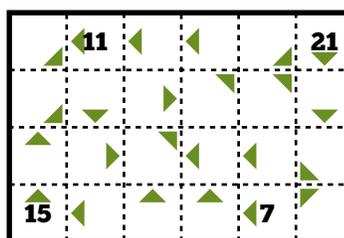

If you like my puzzles, please consider donating to the Crohn's and Colitis Foundation of America on my behalf at [CCFA.org](http://CCFA.org)

Alternately, feel free to stock up my puzzlemaking supplies in my Amazon wishlist, whose link you can find at [The Griddle](http://TheGriddle.com).
