

Instructions

Today's bonus puzzles are shape sudoku with row and column sum clues.

In each grid, fill each of the rows, columns, and 7-cell outlined shapes with one of each digit from 1 to 7. For each row and column with a clue, the digits must add to the given sum when digits between lines form multi-digit numbers.

Thanks to Tyler Hinman for letting me know about a typo making the top-right puzzle impossible in the original posting.
