

## Instructions

In each 9x9 sudoku grid, fill each row, column, and 3x3 box with one of each digit from 1 to 9 with no repeats.

In this variant, some cells contain an arrow clue that points to the cell that must contain the next digit in order within the 3x3 box.

If a clued cell contains a 9, it will point to the box's 1.

All arrows point in either an orthogonal direction or a 45-degree diagonal.
