

Equation Sudoku

Each row and column has each digit from 1 to 4. Use the symbols surrounding the boxes to figure out the digits in each square. Consecutive boxes in a row without symbols are multi-digit numbers. For instance, the top row could be $1 + 2 + 34 = 37$.

$$\square + \square + \square \square = 28$$

$$\square \square + \square + \square \square = 64$$

x - ★ - x

$$\square \square + \square \square = 55$$

$$\square = \square + \square + \square = 19$$
