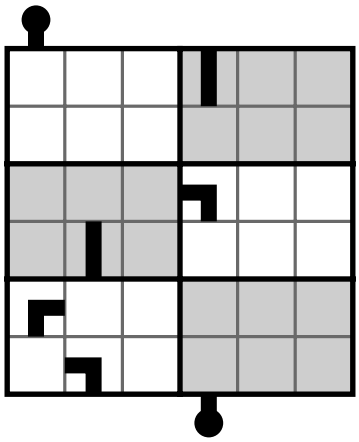
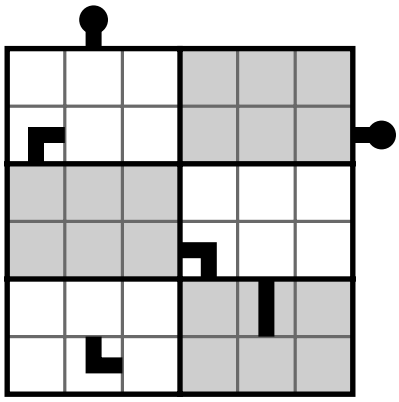
Instructions

In each grid, place one of each tile in each row, each column, and each six-cell rectangle following normal sudoku rules, and connect the exit nodes by a path.

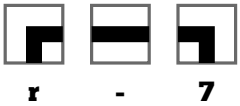
The sixth puzzle has four exit nodes, and it is left as an exercise for the solver to determine the two pairs.





The Tiles

I've given each tile a one-character name so as to facilitate text-based communication when I am working on these:



r - 7

L I J
